

What to expect

GCP Plans and Subscriptions

GCP plans are sold as consumption-based without a specified dollar amount. After submitting an order on the Marketplace, AppDirect will work on providing you with a GCP sub-billing ID as well as login information. If applicable, a Professional Services team member will help set up your GCP environment.

GCP Console Setup and Billing

Your consumption is tied to the billing ID provided by our team. You will need to [log into your GCP console](#) and update your projects using this ID in order to map them back to AppDirect. Please note that whoever completes this process needs to have billing admin access.

In the Marketplace, click [Manage Bills](#) to view your invoices and update your payment methods. Detailed usage will be visible on your GCP console.

"Google Cloud Platform (GCP) is a suite of cloud computing services including computing, data storage, data analytics, and machine learning, alongside a set of management tools."

Next steps

Security and Support

We recommend reviewing Google Cloud Platform security best practices as outlined [in this guide](#) as well as the [IAM QuickStart guide](#) and [Least Privilege guide](#) for a more detailed explanation of user roles and functionality. If applicable, a member of our Professional Services team may also assist with consulting on best practices.

Please note: If you are not a Google Workspace customer, you will need [Cloud Identity Free](#) or [Cloud Identity Premium](#) licensing in order to access their GCP console.

For any general inquiries, support or help, please contact our team at help@appdirect.com
